

How to power Eve door & window sensor?

To power the EVE Door & window sensor, it requires a single AA battery. It has a power supply input voltage of 3.6 V, ensuring efficient and reliable operation. The transmitter, which is responsible for sending the status information, has a width and depth of 18 mm, contributing to its compact design.

How long does the eve door & window sensor module last?

The Eve Door & Window sensor module is powered by a half-AA (ER14250 3.6V) battery, which is included in the box. The battery that came with our review unit ended up lasting about 11 months; that's a tad shy of Eve's estimate of a year, but it's close enough.

Does the eve door & window run on a battery?

The battery-powered Eve Door & Window acts as a Thread endpoint (as does the Eve Aqua, which also runs on a battery), while the plugged-in Eve Energy and Nanoleaf's Thread-enabled lights are Thread routers, which can extend Thread networks by connecting multiple Thread devices together.

Why is my Eve door & window sensor not working?

The EVE Door & Window sensor may have reduced performance or may not work properly on metal doors/windows due to interference. If this is the case, consider using a different type of sensor specifically designed for metal surfaces. How far can the EVE Door & Window sensor be placed from the hub or receiver?

Is Eve door & window sensor a smart home?

Due to the fact that it is both easy to use and has the potential to be of great use, the Eve Door & Window Sensor is one of the most intriguing examples of smart home technology. On the other hand, throughout the process of setting it up, you can run into some typical issues and find it difficult to solve them on your own.

What are the product specifications of the eve door & window?
