

Will Exxon Mobil buy wind & solar power in West Texas?

Exxon Mobil, which reported \$20.8 billion in earnings in 2018, is beginning to purchase wind and solar power in West Texas as part of a 12-year agreement signed late last year with the Danish energy company Ørsted. Renewable energy has gotten so cheap that even oil giants are getting in on the savings.

Why did Exxon run a solar advertisement?

Exxon ran a solar advertisement campaign with the slogan 'Energy for a strong America,' showcasing the company's involvement in solar energy alongside coal and nuclear power. At the same time, Exxon faced competition in the solar industry.

Could solar power Exxon Mobil's Permian Basin?

Exxon Mobil is considering using cheap, clean electricity from solar power to expand its operations in the Permian Basin, one of the world's most productive oil fields. This is not the first time economic considerations have led the company to explore the possibilities of solar power.

Why did Exxon's solar division shut down?

Under President Ronald Reagan, solar subsidies introduced by Carter were phased out, leading to a decrease in demand and lower prices for oil. Exxon closed down its solar division, Exxon Solar Corp., around 1984, after a report found that the solar business would not be self-supporting for at least a decade.

Is NextEra Energy worth more than Exxon?

NextEra Energy, based in Juno Beach, Florida, eclipsed Exxon this week when its value hit \$143.8 billion, edging out the fossil-fuel giant. After the close of trading on Wednesday, NextEra was worth \$900 million more than Exxon and about \$2 billion more than Chevron, America's No. 2 oil and gas producer.

Why was ARCO Solar renamed by Exxon?

At the same time, Exxon was facing competition in the solar industry. In an effort to diversify its holdings during uncertain times, Los Angeles-based oil company Atlantic Richfield (later acquired by Exxon) acquired a solar company, which they renamed ARCO Solar.
