

What is solar energy?

Solar energy comes from the sun's energy, which can be converted into clean electricity through a range of solar technologies. Photovoltaic (PV) systems convert sunlight into electricity, while solar thermal power systems generate heat.

How does solar power work?

Solar power works by harnessing the natural energy of the sun to produce electricity. Solar cells, or photovoltaic cells, capture certain wavelengths of solar radiation and convert them to electricity for various uses, such as powering homes, calculators, and more. This process involves a reaction between photons and electrons on an atomic scale.

How much energy does a solar panel produce?

The majority of solar panels can produce eight to ten kilowatts of energy per square foot. Most homes consume nearly 11,000 kilowatt-hours of energy each year, so to power your entire home off the grid, you'd need upwards of 30 250-watt solar panels that get a daily average of four hours of full sunlight.

What are the benefits of solar power?

Solar power reduces greenhouse gas emissions. It helps combat climate change by decreasing reliance on fossil fuels. Solar energy systems require minimal maintenance. Once installed, they can last for 25-30 years with little upkeep. Solar power can lower electricity bills.
