

## Flexible silicon solar cells with high power-to-weight ratios

In the study "Flexible silicon solar cells with high power-to-weight ratios," published in nature, the scientists said the new cell ranges in thickness from 57 mm to 125 mm and is made using ...

202421,Nature"Flexible Silicon Solar Cells with High Power-to-Weight Ratios" ...

It is found that the 57-mm flexible and thin solar cell shows the highest power-to-weight ratio ( $1.9 \text{ W g}^{-1}$ ) and open-circuit voltage (761 mV) compared to the thick ones.

Crystalline silicon solar cells have been brittle, heavy and fragile until now. Highly flexible versions with high power-to-weight ratios and power conversion efficiencies of...

131,?"Flexible Silicon Solar Cells with High Power-to-Weight Ratios" ...

Silicon is the most abundant semiconducting element in Earth's crust; it is made into wafers to manufacture approximately 95% of the solar cells in the current photovoltaic ...
