

Go power 30 amp solar controller gp-sb-pwm-30-bt

How does GP-SB-pwm-30bt work?

When your battery has reached a 100% state of charge, the controller prevents overcharging by limiting the current flowing into the batteries from your solar array. The Bluetooth-enabled GP-SB-PWM-30BT is a 12 volt flush-mounted, single-bank, photo-voltaic (PV) charge controller rated for a continuous solar current input of 30 amps.

How does a 30 amp solar controller work?

Turn your compatible Go Power! ISW Inverter on or off Our 30 Amp Digital Solar Controller features Maximum Power Boost Technology(MPBT). This allows you to override the normal charging algorithm of the solar controller to 'boost' the solar charge, which is ideal at the end of the daylight to ensure batteries are topped up for the evening.

What is a 30 amp single bank solar charge controller?

The 30 AMP Single Bank Solar Charge controller is coming SOON! It uses PWM technology and increases battery life by preventing over charging.

Does a PWM controller work with a solar system?

PWM controller, works with any of our Larger Solar Kits or Complete Systems (accepts 80-600 watts of solar). A charge controller is an essential component of your photovoltaic (PV) system. The controller maintains the life of the battery by protecting it from overcharging.
