

How do you charge a solar panel on an RV?

Keep your batteries charged, your lights powered, and your DC appliances running with this green, renewable power source. The pre-installed port you see on the side of your RV allows you to connect any portable solar kit. Once you connect your solar kit to that port, place your panel in the sun to start charging your battery.

What happens when you plug in a portable solar kit?

When you plug in a portable solar kit to this port, you charge your RV's batteries. Your batteries run onboard DC electronics like pumps, fans, and lights. What do I need to purchase to use this port? To use this port to charge your batteries you will need to purchase a portable solar kit with a controller.

Does My RV have a solar on the side Port?

Your RV features a Solar on the Side Port. Keep your batteries charged, your lights powered, and your DC appliances running with this green, renewable power source. The pre-installed port you see on the side of your RV allows you to connect any portable solar kit.

How does a portable solar kit work?

This port is wired directly to your battery. When you plug in a portable solar kit to this port, you charge your RV's batteries. Your batteries run onboard DC electronics like pumps, fans, and lights.

How do I connect my solar panel to my RV?

The pre-installed port you see on the side of your RV allows you to connect any portable solar kit. Once you connect your solar kit to that port, place your panel in the sun to start charging your battery. It's that easy! You can also park in the shade for those warm days when having your RV in the sun all day doesn't sound like a great idea.
