

What is Green Mountain Power's net metering program?

Green Mountain Power's (GMP's) net metering program credits customers who generate solar energy and send their excess generated energy back to the grid. This allows customers to generate and use power simultaneously, and it incentivizes the use of solar power.

What is solar net metering?

Solar net metering is a system that allows solar electricity users and producers to send excess power produced by their solar panels back into the main grid. This concept does not apply to off-grid or stand-alone solar systems.

Who can participate in GMP solar?

Any Green Mountain Power customer with metered service may participate. GMP solar is a net metering program that credits customers who generate solar energy. The amount a customer receives is based on the value of the energy that GMP charges the customer, there are additional adjusting values that you could be entitled to. See Rule 5.100.

Is Green Mountain Power a big utility in Vermont?

Green Mountain Power is a large utility in Vermont with a net metered total of 124.4 megawatts (MW) of solar power either built or in the development process.

What is a solar meter and how does it work?

In the context of Green Mountain Power's net metering rates, a solar meter is an additional meter installed to directly measure the amount of solar energy generated. It credits and incentivizes the use of solar power. Any customer with metered service may participate.

What is the cost of net metering in Vermont?

An additional meter is required to participate in Green Mountain Power's net metering program, which has an upfront cost of \$110. All monetary credits from net metering must be used in a 12 month period. As of January 2017, Vermont no longer has a cap on net metering.
