

What is the history of solar energy?

The story of solar energy begins in 1839 with the work of French physicist Edmond Becquerel. From this early discovery to modern rooftop arrays and utility-scale solar farms, this is the complete history of solar energy--and a look at its exciting potential in the years to come.

Who invented solar energy?

Historical figures like Edmond Becquerel and Charles Fritts pioneered solar inventions that laid the foundation for modern solar systems and solar tax credits.

How did solar power become a success?

Take a look at the brief history of the key events that led to solar power becoming the success that it is today. While experimenting with metal electrodes and an acidic solution, nineteen-year-old French physicist Alexandre Edmond Becquerel creates the first solar cell.

When did solar energy become a standard power system?

Solar energy's significance grew in the 1970s when photovoltaics became the standard power system for NASA's spacecraft. This technology remains the primary power source for spacecraft today. Back on Earth, solar energy technology continued to advance gradually through the mid-20th century but remained uncompetitive with cheap, readily available fossil fuels.

How did early solar technology contribute to the development of solar energy?

Early solar technologies, such as burning mirrors and basic solar thermal systems, illustrated the potential of solar energy during the industrial age. They showcased the ingenuity of early scientists. These innovative methods effectively harnessed sunlight.

How did humans use solar energy?

In the 7th century B.C., humans discovered that sunlight could be concentrated using a magnifying glass to create fire. This marked one of the earliest instances of humans manipulating solar energy for a specific purpose.

This 184-year history can be conveniently divided into six time periods beginning with the discovery years from 1839 to 1904. Table 1.1 gives the most significant events during this first period. In 1877, Adams and Day observed the PV effect in solidified selenium [] and in 1904, Hallwachs made a semiconductor-junction solar cell with copper and copper oxide.
