

How much does it cost to charge an EV at home?

Charging at home is three to six times cheaper than charging at a public charging station, which can cost up to \$0.60 per kWh. The cheapest way to charge your EV is to do it overnight or at least outside of peak electricity times. Is charging at home the fastest way to charge an electric car?

Which EV charging station should I use?

If you don't have outlets accessible or you need faster-charging speeds than Level 1 charging, you may want to install a higher speed home charging station. A Level 2 SAE J1772 plug. Many EV owners install a Level 2 charger at home, which uses a 240-volt socket. This is the same outlet that runs a clothes dryer.

Can You charge an electric car at home?

Electric vehicles (EV) are the future and becoming more and more popular. These cars can be charged almost anywhere, but to take full advantage of an EV, the charging should be done at home. However, home charging stations are quite complex products and most people have no idea where to start.

How can I charge my EV overnight?

To charge your EV overnight, install a 40- or 50-amp circuit in your home. We recommend using a NEMA 14-50 outlet, allowing the charging equipment to simply plug in like any other household device. This will enable most EVs to charge fully overnight.

What are the benefits of charging an EV at home?

Trust us, you'll want to be charging at home as much as possible. This has two significant benefits: Charging can be accomplished when the vehicle is otherwise parked, and home charging is substantially cheaper (roughly one-third the cost) of DC fast-charging. On average, an EV charger will have an up-front cost of between \$400 and \$500.

Which EV charging point should I buy?

The Zappi is one of the more fully featured EV charging points. You'll get the most out of it if you've also got a green power source such as solar panels, but even without them it compares well to many other home chargers on the market.
