

How does a solar panel system work with my home?

Exactly how the solar panel system works with your home and the electric grid depends on the type of solar panel system you have. There are three main types of home solar systems: grid-tied, hybrid (or solar-plus-storage), and off-grid.

Can solar panels power a home?

Yes, solar panels can power a home. They are used to power everything from calculators to sports stadiums to satellites.

Why should you use solar energy to power your home?

Using solar energy to power your home can help protect you from rising energy costs. It's free, clean, and integrated with Tesla's ecosystem of products that work together to optimize your energy usage and savings while minimizing your impact on the environment.

How many solar panels do I need for my home?

The number of solar panels you need depends on your energy usage. Most home solar systems use between 15 and 19 solar panels, but the exact number needed is unique for each home.

What are the benefits of installing home solar panels?

There are several benefits to getting solar panels for your home, like electricity bill savings and powering your home with clean energy. Despite being a leading clean energy technology, there is still a lot of mystery surrounding installing home solar panels.

How do solar panels generate electricity?

Solar panels work by converting sunlight into an electric current. When sunlight hits the panels, it creates this current, which is first used to power electrical systems in your home. If your panels are producing more electricity than your home is using, the excess is stored in a battery and/or pushed onto the local energy grid to power your neighbors' homes.

The cost of solar panels ranges anywhere from \$8,500 to \$30,500, with the average 6kW solar system falling around \$12,700. It's important to note that these prices are ...
