How california utilities are managing excess solar power

What if California didn't pay utilities for solar energy?

The waste would have been even largerif California had not paid utilities in other states to take the excess solar energy, documents from the state's grid operator show. That means green energy paid for by California electricity customers is sent away, lowering bills for residents of other states.

Why are California's solar power curtailments increasing?

California's solar power curtailments have been increasing due to the growth in solar powerto meet the state's aggressive clean energy goals. As of the first quarter 2021, California had more than 31,800 megawatts of solar, generating almost 24 percent of the state's electricity according to the Solar Energy Industries Association

How much solar power does California have?

California had almost 31,800 megawatts of solar poweras of the first quarter 2021, generating about 24 percent of the state's electricityaccording to the Solar Energy Industries Association. California has the largest solar market in the United States.

Will California's solar energy plan work?

Solar is the linchpin of California's plan to generate all its electricity from carbon-free sources by 2045,but some energy experts question the feasibility of the plan given the state's inability to use its existing solar capacity.

Why is solar power a problem in California?

That's because in the spring and fall, when Californians aren't using much air conditioning and demand for electricity is low, the surge of midday solar power is more than the state can use. It's becoming a growing concern for those running the grid at the California Independent System Operator.

Why are California's solar farms halting production?

In the last 12 months, California's solar farms have curtailed production of more than 3 million megawatt hours of solar energy, either on the orders of the state's grid operator or because prices had plummeted because of the glut, according to an analysis of data by The Times.

California: The introduction of Net Energy Metering (NEM) 3.0 in late 2022 reduced compensation rates for surplus solar power by 75%. This radical change led to a 90% drop in new solar applications by May 2023 and ...

Those rules set out how much utilities pay customers for the excess energy from solar installations they feed into the grid. First houses, now apartments. Today's ruling is a ...
