

# How many solar panels are needed to power my home

How many solar panels do you need to power a house?

The goal for any solar project should be 100% electricity offset and maximum savings -- not necessarily to cram as many panels on a roof as possible. So, the number of panels you need to power a house varies based on three main factors: In this article, we'll show you how to manually calculate how many panels you'll need to power your home.

Do you need enough solar panels?

To meet your energy consumption and be fully dependent on solar power, you need enough solar panels. However, the calculation can be tricky as the amount of energy your household consumes depends on various factors.

How much power does a solar panel use?

Solar panel power ratings range from 250W to 450W. Based on solar.com sales data, 400W is the most popular power rating and provides a great balance of output and Price Per Watt (PPW). If you have limited roof space, you may consider a higher power rating to use fewer panels. If you want to spend less per panel, you may consider a lower wattage.

How much electricity does a solar system use?

Electricity usage is a very important factor, as it determines how much power must be generated by your solar panel system. If your home uses 12,000 kilowatt-hours (kWh) per year and you want to go 100% solar, your system must be capable of generating that amount of power.

What size solar panels do I Need?

There are three main sizes for solar panels: 60-cell, 72-cell and 96-cell. The 60- and 72-cell panels are more common for residential installations and are generally about 3 by 5 feet, or 15 square feet. The more hours of sunlight your roof is exposed to, the fewer panels you'll probably need to install.

How much roof space do solar panels need?

The industry average square footage of a solar panel is 17.55 square feet, but this number will vary depending on your panels. Below we've provided estimates for the amount of roof space you'll need if you install a 9 kW solar system but choose panels with a wattage other than 350-watts:

Average number of solar panels for a 2,000-square-foot home. To make the average amount of energy used by a home in America, a 2,000 sq. ft. home would need between 16 and 21 solar panels. That's assuming the home has a ...
