

Can you sell solar power to generate income?

Contrary to popular belief, the financial benefits of solar energy don't stem from selling excess power back to the grid but from significant savings and credits. Unfortunately, selling your solar power to generate income is not a profitable option. You can't exactly sell the electricity your solar system generates back to the utility.

How much will I be paid if I sell solar power?

The amount you'll be paid for selling solar power back to the National Grid through the Smart Export Guarantee will vary depending on the tariff you choose. It could be between 1p/kWh to 24p/kWh- the best rate available at the time of writing. Rates do change, though, so it's always worth looking at the latest tariffs.

How many kWh can a solar system sell?

How many kWh your system can sell will depend on how many panels you have, how much sunlight you have, and how much of the solar power you use directly. For example, if you have a 5kW system, you'll only get around \$2.5 per day even you sell all your solar generated power back to the grid.

Can I sell solar power back to a retailer?

If you're selling power back to an energy retailer, you'll generally need to be signed up with that retailer for your own grid power use. If you generate enough solar power to cover all your needs and then some, this isn't an issue, as you won't be using grid energy.

Can you sell solar energy to a utility?

You can't exactly sell the electricity your solar system generates back to the utility. However, one of the biggest benefits of solar energy is its impact on your finances. Your solar energy system will save you money that you would otherwise spend on your monthly electricity bill from the utility company.

How much do solar panels make a month?

Depending on your state and how much power your solar panels produce, what you make by selling solar energy back to the grid might vary. But on average, you can make about \$50-\$700+ per month. How much you actually get paid is dependent upon factors like how big your system is and what time of day it is producing energy.
