

How should you dispose of empty chemical containers?

How should you dispose of empty chemical containers is governed by environmental laws that strictly regulate the disposal of such containers. The residue within empty chemical containers can pose a threat as hazardous waste if not treated properly.

Can you use old containers for hazardous waste?

Old containers can be used for water storage collection or to dispose of spill residue. These containers should not be used for any radioactive waste storage or disposal. Be sure that the container you reuse is compatible with the hazardous waste or other chemicals you are storing.

Can you use a solvent to rinse an empty container?

Do not use a solvent to rinse an empty container because it generates more waste. If an empty container requiring disposal is stinky, non-miscible (and not P-Listed) the easiest solution is putting it into a plastic bag and placing it in the dumpster.

What should you do with containers holding hazardous waste?

Keep all containers holding hazardous waste closed during storage, except when adding or removing waste. Use a container made of--or lined with--a material that is compatible with the hazardous waste to be stored.

How do you dispose of a plastic container in a laboratory?

The plastic container or box should be sealed and placed in regular laboratory trash. Metal containers must be triple-rinsed with water or other suitable solvent and air-dried. If the container is free of hazardous chemical residues, it may be placed in the regular laboratory trash. Otherwise, it should be disposed as medical waste.

What are the best uses for empty chemical containers?

One of the best uses for empty chemical containers is to reuse whenever it is possible or appropriate. Old containers can be used for water storage collection or to dispose of spill residue. These containers should not be used for any radioactive waste storage or disposal.
