How to make a background transparent using CSS?

To make a background transparent in CSS,use the CSS opacity property. However,be aware that this property also affects the transparency of the element's child elements.

How to make a non-transparent Div a transparent Div?

As you likely know, just because an element occupies the same space as another element, doesn't make one a child of the other. That's the beauty of CSS positioning. So the trick to getting our non-transparent text into a transparent div is just to put that text outside of the div and push it visually inside with some CSS positioning.

Can a child element be less transparent than a parent element?

As far as I know,there is just no wayto force those child elements to be an less transparent than their parent element. And therein lies the solution. What if that child element wasn't technically a child element. As you likely know,just because an element occupies the same space as another element,doesn't make one a child of the other.

How do I make a box transparent?

Using a value of 0would make the box completely transparent,and values between the two will change the opacity,with higher values giving less transparency. In many cases you will only want to make the background color itself partly transparent,keeping the text and other elements fully opaque.

What happens to child elements when you use CSS opacity?

The opacity property not only makes the styled element transparent -- it also makes its child elements transparent.
