

How do you sell solar energy back to the grid?

Selling electricity back to the grid, also known as an export rate, or net metering, is a process that allows solar panel owners to generate their own electricity and earn credits for excess energy they feed back into the grid. Here's a detailed explanation of each step involved in sell solar power: 1. Installation of solar panels:

How do you sell back solar power?

Read on to learn about the different ways to sell back power. This is the most common way consumers believe they can sell electricity to the grid. However, the way that you can earn income from excess solar power is through net metering. Currently, there are over 35 states that offer a net metering program for solar system owners.

Can you sell solar power to the grid?

Although many people with solar systems on their homes or businesses think that they can sell excess electricity to the power grid, the reality is that you can only sell power to the grid if you have an electricity generator's license and qualified power-generating assets.

How much will I be paid if I sell solar power?

The amount you'll be paid for selling solar power back to the National Grid through the Smart Export Guarantee will vary depending on the tariff you choose. It could be between 1p/kWh to 24p/kWh- the best rate available at the time of writing. Rates do change, though, so it's always worth looking at the latest tariffs.

How do I Sell my solar panels?

Find a good location to sell your solar panels. If you are selling to homeowners, consider setting up a display at a local home improvement store or green fair. If you are selling to businesses, consider exhibiting at trade shows or business expositions that focus on environment-friendly products and services. Price your solar panels competitively.
