

What is an electric vehicle charging station?

As suggested by its name, an Electric Vehicle (EV) charging station is an establishment for recharging plug-in electric cars. One can also describe it as an element used to charge electric cars. The station consists of hi-tech equipment and infrastructure that connect electric vehicles to a source of electricity in order to charge them.

How to use an EV charging station?

The good news is that recharging your vehicle at an EV station is easy. All you have to do is to plug in your vehicle into a designated charging port connected to an electric grid. Here are steps on how to use an EV charging station. Importantly, you should turn off your EV before plugging the car into an outlet.

How to charge your car with a car charger?

To start charging your car, you need to plug in the connector into the designated charging port. Interestingly, you have the option of choosing your preferred charging speed, ranging from slow to rapid. However, the ideal charging speed will depend on the type of charger used and your vehicle's battery capacity.

Can You charge a car at a public EV charging station?

Topping up your car at a public electric vehicle charging station is not-too-distant from adding fuel at the pump. However, like any new technology, it can be a tricky adjustment. There's also some common skepticism about third-party EV charging stalls and providers that aren't a Tesla Supercharger.

How do I charge an EV?

The experience of charging an EV is typically straightforward and seamless but may vary slightly by car or charging station. Below, you'll find some simple instructions on how to charge your EV at Level 2 and Level 3 Charge charging stations. Plug in your car.

How do you charge a car with a cable?

Connect the car to the charger. If the cable is built-in to the charger, you just need to connect it to your car's charging port, often located on either side or under the badge at the front. If you're using your own cable, you'll have to plug this into the public charging station as well.

Both connectors can be found at most Electrify Canada charging stations and identified by the teal, green, and blue labels on the chargers. Our CCS connectors can charge at speeds up to 350 kW, while CHAdeMO ...
