

Are solar panels still worth it?

According to Chris Barnes from consumer group Choice, the answer is pretty clear. "In almost all cases for almost all homes, yes, it's still worth it," he said. "That's a reflection of the fact the price of the actual panels has gone down and the capacity of the solar panels has gone up."

Do solar panels increase property value?

Solar panels are attractive to potential new homeowners when you next sell your home, which can increase your property value as a result. That might seem like a long time, but it's worth remembering that solar panels can provide all of your energy needs, making your home potentially energy self-sufficient.

Can solar panels help you save money?

Solar panels can save you money if your state has robust net metering or you have high energy costs. If you plan to stay in your home for many years and believe the short-term energy savings and increased home value will recoup your investment, solar panels could pay off.

How much value can solar panels add to a home?

Solar panels can add around \$15,000 of value to your home. According to the US Department of Energy's Lawrence Berkeley National Laboratory, homes with solar panels sell quicker than those without. Solar panel cost and efficiency has improved greatly over the last 10 years.

Do more solar panels cost more?

Generally speaking, a bigger system with more panels will have a higher average cost than a system with fewer panels. While cheaper solar panels may seem like the easiest way to save money on a solar system, investing in high-quality equipment usually yields greater long-term savings.
