

Is solar leasing worth it?

Solar leasing has been the leading alternative to buying solar panels for the last 15 years. But is the concept still worthwhile, or has it outlived its usefulness? This is a question that many in the solar industry are asking this year. How does a solar lease work? The upfront costs of installing solar panels are significant.

Should I lease or buy solar panels?

You cannot choose the mounting locations for your solar panels if you lease them, which means that you may not be able to install the system in a way that is most beneficial for your home or that maximizes energy production. When you lease solar panels, the leasing company assumes responsibility for ongoing maintenance, monitoring and repairs.

Who benefits most from solar leasing?

Solar leasing works best for homeowners who can't afford the high upfront costs of purchasing solar panels or the responsibility of ongoing maintenance. Under this agreement, you make monthly lease payments and get full access to all solar power generated, which helps lower your utility bills.

What are the advantages of leasing solar panels?

There are a few advantages to leasing solar panels. These include: Lower upfront cost: One of the biggest advantages of leasing solar panels is that it requires little to no money down. This makes it a great option for people who want to go solar, but don't have a lot of money upfront.

How does solar leasing work?

Solar leasing, also known as a solar power purchase agreement (PPA), works by allowing you to make monthly lease payments in exchange for full access to the solar power generated by the panels. This helps lower your utility bills without the high upfront costs or maintenance responsibilities of purchasing the panels.
