

Is investing in solar panels a good idea?

If you're planning to stay in your home for many years and believe the short-term energy savings and increased home value will recoup your investment, solar could pay off. However, if you don't have high energy costs or your state makes it difficult to go solar, it might not be worth it financially.

When is solar not a good investment?

If you don't have high energy costs or your state makes it harder to go solar, it might not be worth it financially. If you aren't planning on moving for many years or have reason to believe the short-term energy savings and the boost to your home's value will recoup your investment, solar could pay off.

Is solar power a sustainable investment?

One of the most often-cited types of alternative energy is solar power, making it a popular choice for sustainable investing. As more individuals, companies, and governments become concerned about global climate change, there's an increased interest in renewable energy as part of a socially responsible investing portfolio.

What is solar investing and how does it work?

Solar investing encompasses investments in various aspects of the solar energy supply chain. This includes investing in companies like First Solar (ticker: FSLR) that produce large-scale solar panels.

Why should you invest in solar energy?

The biggest advantage of solar investing is that it's sustainable. The sun still has billions of years in it, and there are wide swaths of land in the United States that have a high percentage of sunlight each year. Eventually, there will be no more oil to drill, natural gas to frack or coal to mine.

Can solar panels help you save money?

Solar panels can save you money if your state has robust net metering or you have high energy costs. If you plan to stay in your home for many years and believe the short-term energy savings and increased home value will recoup your investment, solar panels could pay off.
