

Are solar panels worth it in California?

Going solar is worthwhile for most homeowners, but many California residents aren't fully aware of the benefits of going solar in the Golden State. Below, we'll discuss some of the financial and environmental upsides to installing solar panels in California. Saving money on your energy bill has never been easier with solar energy.

How much does solar cost in California?

California consistently ranks among the best states in the country for solar-friendliness, and it's currently the best place in the nation to convert to solar energy. Without considering battery costs, Californians pay an average of \$19,980 before the federal tax credit, or \$13,986 after the 30% credit.

Is California a good place to go solar?

Almost 2 million solar installations already exist in California -- enough to power more than 13 million homes and account for about 28% of the state's electricity. California's climate makes it a great location for going solar. The main drawback is the high cost of purchasing and installing the panels and equipment.

Do solar panels work in California?

Solar panels are only as efficient as the sunlight they receive, so the amount of sun that normally hits your roof throughout the day is an important thing to consider. California as a whole experiences an incredible 278 days of sunshine a year, which means that solar panels are a great option for most residents.

How long do solar panels last in California?

The average payback period in the United States is 11 years, but the high price of electricity and the generally high solar collection potential in most of California allows homeowners to pay off their panels in an average of just 7 years, not including the cost of batteries.

Are solar panels a good investment?

Saving money on your energy bill has never been easier with solar energy. Solar panels typically pay for themselves with energy savings. This is one of the most significant financial benefits of going solar, especially in an area like California, where monthly electric bills are the highest in the U.S. except for Hawaii and Alaska.
