

Why is CATL launching a new LFP battery?

The company explains that this comes from continuous technological breakthroughs. CATL says its new battery is the world's first LFP battery that achieves a range above 1,000 kilometres with 4C superfast charging, emphasised Gao Huan, Chief Technology Officer of CATL's electric car division, when presenting the battery at the auto show in Beijing.

How many kilometres can a CATL LFP battery charge?

CATL says it has fine-tuned its LFP technology and significantly improved LFP batteries ready for the market. It is said to enable ranges of "over 700 kilometres" on a full charge. However, CATL does not specify which test cycle. On the other hand, the Chinese company specifies a charging capacity of 4C for its new Shenxing battery.

What is a fast-charging LFP battery?

CATL has unveiled a particularly fast-charging LFP battery for electric vehicles that is expected to go into mass production as early as the end of 2023. According to CATL, the battery, called Shenxing, can store enough energy for a range of 400 kilometres during a ten-minute charging process thanks to a series of optimisations.

By when will CATL reduce the cost of LFP batteries by 50%?

In January, CATL said it would reduce the cost of LFP batteries per kWh by a massive 50% by the middle of 2024. It looks like it's well on its way. LFP batteries are typically cheaper but are known to offer lower energy density. CATL's new battery looks to change that.

What is a Shenxing Plus LFP battery?

At Auto China in Beijing, CATL has presented its new Shenxing Plus LFP battery designed to give electric cars a range of more than 1,000 kilometres. The battery with durable lithium iron phosphate cells is also said to be very quick to charge.

What is the charging speed of CATL's latest battery?

CATL's latest battery, Shenxing Plus, uses cheaper, more advanced lithium iron phosphate for even faster charging. Its previous battery, Shenxing SuperFast Charging Battery, was capable of adding 248 miles (400 km) in 10 minutes.

Safe, reliable and long-life LFP BESS has always been the core of CATL philosophy and CATL is committed to continuous LFP improvement. In addition to the stringent UL 9540A test, CATL liquid cooling LFP battery rack ...

At Auto China in Beijing, CATL has presented its new Shenxing Plus LFP battery designed to give electric cars a range of more than 1,000 kilometres. The battery with durable lithium iron phosphate cells is also said to ...

CATL says it will begin selling LFP battery cells in the VDA format at price less than \$60 per kWh hour by the middle of this year. ... The takeaway here seems to be that lower battery prices from ...

Ampere, the European intelligent EV pure player born from the Renault group, announced a battery plan integrating LFP (Lithium Iron Phosphate) technology alongside the NCM (Nickel Cobalt Manganese) batteries currently used by Renault Group. Ampere is working with its suppliers LG Energy Solution and CATL to set up an integrated value chain on the ...

Stellantis and CATL will invest up to EUR4.1 billion, or around \$4.25 billion, to build the large-scale European LFP battery plant. CATL and Stellantis announce new joint venture EV battery plant ...

The battery, called Shenxing Plus, is said to be the first LFP battery that enables a range of 1,000 km (621 miles) and can also be charged very quickly (at 4C), writes CATL. However, the...

Tesla is reportedly looking to build a battery plant in the United States using technology from China's Contemporary Amperex Technology (CATL) for lithium iron phosphate (LFP) cells.

Boulogne-Billancourt, July 1st, 2024 - Ampere, the European intelligent EV pure player, today announced an ambitious battery plan integrating LFP (Lithium Iron Phosphate) technology alongside the NCM (Nickel Cobalt Manganese) batteries currently used by Renault Group. This decision is an...

CATL has unveiled a particularly fast-charging LFP battery for electric vehicles that is expected to go into mass production as early as the end of 2023. According to CATL, the battery, called Shenxing, can store enough ...

(Slave Battery Management Unit) MBMU (Master Battery Management Unit) Energy System Cell Module Rack System Safety System Chemical Safety Wire Insulation Thermal management ... 100Ah-4.3U LFP CATL BESS / Liquid Cooling Solution 05 Liquid Cooling Solution 280Ah LFP 280 Charge/ Discharge Rate (P) 0.5

Tesla will seemingly use prismatic lithium-iron-phosphate (LFP) batteries from CATL in its Made in China Tesla Model 3 Standard Range Plus.

Now, CATL has debuted a new type of LFP battery that promises a driving range of 1,000 kilometers, or 621 miles per charge, according to Reuters. Dubbed the Shenxing Plus, this new LFP battery is the first of its kind ...

Showcased during this year's Beijing Auto Show, CATL's new LFP battery system is capable of providing up to 370 miles of driving range after a 10-minute top-up, while the total driving range...

LFP batteries have gained immense popularity worldwide due to their cost-effectiveness. However, most LFP battery production has been dominated by China, with CATL leading the market. Advertisements. CATL ...

In November 2023, Stellantis and CATL signed a non-binding MOU for the local supply of LFP battery cells and modules for electric vehicle production in Europe and established a long-term collaboration on two strategic fronts: creating a bold technology roadmap

Stellantis and CATL have announced that they will form a 50:50 joint venture to establish an LFP battery cell production facility in Spain. The two companies are investing up to 4.1 billion euros in the factory for LFP battery ...

The Megapacks come with a 15-year capacity-retention guarantee, so by using CATL's LFP cell technology, Tesla may be able to up its Megapack warranty. ... which also has novel LFP battery ...

The world's largest battery producer, CATL (Contemporary Amperex Technology Co., Limited), has made a big announcement today. At a product launch in Ningde, China, the company announced that it ...

Citing insiders, BNN Bloomberg reports that Tesla is planning to buy production equipment from CATL for installation in a new battery plant in the city of Sparks, which could go into operation in 2025. The people familiar with ...

Kia is using battery cells from CATL for the first time in the new generation of the Niro EV. Until now, Kia has relied exclusively on cells. ... it is "the first time that CATL, which mainly produces lithium-iron-phosphate (LFP) batteries, has mass-produced NCM batteries in a car model. This means that quality or safety has not been ...
