Are phase change materials suitable for solar energy systems?

Phase change materials (PCMs) are suitable for various solar energy systems for prolonged heat energy retaining, as solar radiation is sporadic. This literature review presents the application of the PCM in solar thermal power plants, solar desalination, solar cooker, solar air heater, and solar water heater.

What are phase change materials (PCMs)?

Phase change materials (PCMs) are extensively used nowadays in energy storage devices and applications worldwide. PCMs play a substantial role in energy storage for solar thermal applications and renewable energy sources integration.

What is the role of phase change materials in energy storage?

PCMs play a substantial role in energy storage for solar thermal applications and renewable energy sources integration. High thermal storage density with a moderate temperature variation can be attained by phase change materials (PCMs). Considerable research has been carried out for energy storage to achieve better efficiency and performance.

Can phase change materials be used as energy retaining materials?

Many authors have presented review articles on phase change materials based solar energy systems. Liu et al. (2012) conducted the review in PCMs with high melting temperatures and found that such materials can be used as potential energy retaining mediums. Also, reviewed several possibilities to enhance the heat exchange characteristics of PCMs.

Are phase change materials a good thermal energy storage medium?

Phase change materials are particularly used as a thermal energy storage medium and it has been widely used in several applications in the recent 20 years, yet at the same time the data is quantitatively massive and tough to disclose.

How can solar energy be stored?

An effective method of storing thermal energy from solar is through the use of phase change materials (PCMs). PCMs are isothermal in nature, and thus offer higher density energy storage and the ability to operate in a variable range of temperature conditions.
