

# Materials used for containers in solid waste management

What is a solid waste container?

Solid waste does not necessarily mean solid material, but rather anything that can be discarded without causing harm to human health and the environment. The following containers are typically used to haul non-toxic waste, such as garbage, debris, scrap, ocean/lake water and recyclable materials.

What types of containers are used to haul non-toxic waste?

The following containers are typically used to haul non-toxic waste, such as garbage, debris, scrap, ocean/lake water and recyclable materials. Rectangular containers can be found in different sizes and grades to best fit the hauler's needs.

What are these containers used for?

These containers are used for special type of wastes (i.e.) when the wastes need separate treatment and processing. Hauled/movable containers: These types of containers are fixed with wheels to facilitate its movement to waste processing site, transfer station or directly to the disposal site.

What should a waste collection container be made of?

Waste collection containers should be made of inert materials to avoid reactivity with waste. Additionally, containers should not have sharp edges to prevent injury to waste collector crew.

What types of containers are used for waste generation?

In areas with very high waste generation rates, i.e., rates exceeding two truckloads daily, such as wet markets, large commercial centres and large business establishments, roll-on-roll or hoisted communal containers with capacities of 12 - 20 m<sup>3</sup> and a strong superstructure with wheels are used.

What are the different types of waste containers?

There are different types of waste containers, including special containers for specific waste types that require separate treatment and processing. Additionally, there are communal or public containers, which are conventional types that have been in use for decades.

**SOLID WASTE MANAGEMENT** o Waste Collection and Storage ... Waste minimization at source 2. Material Recycling 3. Waste Processing (Energy / Material recovery) ...
