New York ranks second, with 6.1% of the total charging stations, followed by Florida (5.4%), Texas (4.8%) and Massachusetts (4.6%).

How many electric vehicle charging stations are there?

Electric vehicle charging stations have grown steadily, with a 43.7% compound annual growth rate (CAGR) between 2018 and 2023, from 22,826 stations nationwide to 64,187. However, electric vehicle (EV) station growth is heavily concentrated among a handful of states, with five states accounting for 46.4% of the nation's total EV charging stations.

What is the most common electric vehicle charging network in the US?

The ChargePoint network provides the most electric vehicle charging outlets in the United States. Fast-charging public stations are being built across the United States, but not all battery electric vehicles are alike; the method and speed of charge vary depending on specifications related to the battery's chemistry and the type of charger.

How many EV charging stations are there in Colorado?

The only mountain state to edge its way into the top ten, in Colorado you will find 884 EV charging stations and 2,604 outlets. The number of electrical vehicles Coloradans purchase though is still quite modest. Only 7,051 vehicles in 2018 representing around 2.61% of the total new car registrations in that state.

Which US state has the best EV charger ratio?

North Dakota has the best ratio of chargers to EVs, but those numbers don't hold much water since US EV adoption is its most anemic in Roughrider Country. Washington, DC, seems well equipped to handle growing EV drivers, and currently has the closest ratio of EV chargers per capita, albeit a tiny sample map compared to any actual state.

Which states have the most EV charger ports?

The state of New Jersey, which as of September 31, 2021 had the 6th most cumulative EVs in the US, had the highest (worst) ratio of EVs to charger ports at 41.3 to 1. In a distant second place, California with 930,811 cumulative EVs, had a ratio of 27.2 to 1 charger port.
