What is a battery date code chart?

A universal battery date code chart is a system used by manufacturers to indicate the date a battery was produced. The code is a series of characters printed on the battery, similar to an expiration date. Understanding the date code on a battery can be useful in determining its life expectancy. How do you read a battery date code?

What should a Narada battery be placed in?

Page 14 Batteries shall be placed in are with clean ambient and low humidity. Heavy weight shall not be placed on any cable. Ensure that the communication protocols of the rectifier and battery match. Narada will not be responsible for the debugging failure caused by the mismatch of communication protocols.

How do I know if a battery has a manufacture date?

To find the manufacture date on a car battery, look for a code hot stamped onto the side. The first two digits of this code usually indicate the manufacture date. Unfortunately, there is no standard code for this information. You can use the following table to help decipher the code.

How do you read a car battery date code?

To read a car battery date code, take the code, F3D201. This code represents a date, with the order of month and day depending on the production location. In this case, F3D201 translates to March 201. A quick guide on how to read car battery date codes.

How can I tell if my Napa battery has a date code?

Some Napa batteries have a date code stamped on the top or side. This code could be four characters long (e.g., K80F) or up to 15 characters long. In the four-character code, the first character (K) represents the month (November), and the second character (8) represents the year (2018).
