

Will China set a new record for solar power installations in 2024?

LI XIN/FOR CHINA DAILY China is on track to set a new record for solar power installations in 2024, driven by falling production costs and increased global interest in renewable energy, said industry experts and company executives.

Is demand for solar energy still strong?

Despite ongoing challenges in the photovoltaic industry, including significant price reductions and reduced profit margins, demand for solar energy remains strong, both domestically and internationally, said Wang Bohua, honorary chairman of the China Photovoltaic Industry Association.

Is solar the fastest growing energy source in the world?

The milestone has been reached thanks to the "staggering" rise of solar, which has doubled in just three years, energy thinktank Ember said in its new report. And solar was the fastest-growing electricity source for the 20th year in a row. It now provides 7% of the world's electricity.

How much solar power will China install this year?

With the world's largest, most complete new-energy industry chain, China is expected to install 230 to 260 gigawatts of solar capacity this year, topping the record of 217 GW set last year, according to the China Photovoltaic Industry Association.
