

Plug in hybrid electric vehicle energy storage system design

What are plug-in hybrid electric vehicles (PHEVs)?

Nowadays, plug-in hybrid electric vehicles (PHEVs) are attracting increasing attention from the automotive industry [1]. Compared with traditional hybrid electric vehicles, PHEVs are equipped with larger capacity batteries that can be charged from the power grid, which greatly reduce the energy consumption cost and carbon dioxide emissions [2].

What is layered energy management strategy for hybrid electric vehicles?

For the purpose of enhance the fuel consumption rate together with stabilize the control strategies concerning hybrid electric vehicles. This work introduces a layered energy management strategy combining the Equivalent Consumption Minimization Strategy (ECMS) and Deep Reinforcement Learning (DRL).

What is hybrid energy storage system (Hess)?

A supercapacitor has a higher power density and can withstand high current,thus the hybrid energy storage system (HESS) composed of batteries and supercapacitorsgreatly reduces the peak power of the battery and prolongs the battery life. In addition,it also has the advantages of high energy utilization and high safety [6,7].

What is hybrid battery and ultracapacitor energy storage system (Hess)?

In this hybrid battery and ultracapacitor energy storage system (HESS), batteries are preferred for providing the total electricity energy of the PHEV, while the ultracapacitors are required to serve as power buffers , , .

Why do electric vehicles need energy storage systems?

The depletion of oil resources and growing problems in haze pollution have greatly encouraged the development of electric vehicles , . As one of key technologies and components in electric vehicles, studies on the energy storage systems (ESSs) have drawn increasing attention.

Do electric vehicles need a high specific power capacity?

Especially for plug-in hybrid electric vehicles (PHEVs), these systems require both high specific energy capacities for long driving distances and high specific power capacities for acceleration, braking, climbing, etc. Current battery technologies cannot fully satisfy both requirements.

The conventional vehicle widely operates using an internal combustion engine (ICE) because of its well-engineered and performance, consumes fossil fuels (i.e., diesel and petrol) ...

Batteries, ultracapacitors (UCs), and fuel cells are widely being proposed for electric vehicles (EVs) and plug-in hybrid EVs (PHEVs) as an electric power source or an ...

Plug-in hybrid electric vehicles (PHEVs) are considered as one of the most promising means to improve the near-term sustainability of the transportation and stationary ...

Plug in hybrid electric vehicle energy storage system design

Therefore, the primary objective of this effort is to provide efficient energy management for the EV system. To do this, we will use a DC-connected battery and a super capacitor hybrid energy storage system (HESS). The ...

A new battery/ultracapacitor hybrid energy storage system for electric, hybrid, and plug-in hybrid electric vehicles IEEE Trans Power Electr, 27 (2012), pp. 122 - 132 View in ...

For FC hybrid electric vehicles, a hybrid energy storage system with a combined architecture and power management technique is given ... System design/testing of fuel cell ...

Energy storage systems play a crucial role in the overall performance of hybrid electric vehicles. Therefore, the state of the art in energy storage systems for hybrid electric vehicles is discussed in this paper along ...

The most emerging transportation system, i.e., EV, is also described as an automobile vehicle that develops through the electric propulsion system. Due to this, EVs may ...

This paper proposes a multi-dimensional size optimization framework and a hierarchical energy management strategy (HEMS) to optimize the component size and the power of a plug-in ...

Electric vehicles (EVs), including battery-powered electric vehicles (BEVs) and hybrid electric vehicles (HEVs) (Fig. 1a), are key to the electrification of road transport ...

Plug-in hybrid electric vehicle is a transitional technology between BEVs and HEVs. The IEEE (board of directors, 2007) defines a PHEV as "any hybrid electric vehicle that contains at least ...

In this paper, a new battery/ultracapacitor hybrid energy storage system (HESS) is proposed for electric drive vehicles including electric, hybrid electric, and plug-in hybrid electric ...
