# Power home solar decatur indiana

How much does solar cost in Indiana?
Both the cost per watt and the typical system size requirement are slightly above the national averages of $3.33 and a 9 kW system. That means Indiana Hoosiers pay above-average prices to convert to solar. As such, most residents will look for ways to bring costs down and boost long-term savings.

How efficient are solar panels in Indiana?
Companies like Renogy and Grape Solar that are available to DIYers often have efficiency ratings between 15% and 20%,whereas the top brands for professional installations can top 22%. As mentioned above,solar panel efficiency is crucial in a place like Indiana because the available sunlight is significantly lower than it is in most other states.

How much does a photovoltaic system cost in Indiana?
This average assumes you pay the typical $3.66 per watt for photovoltaic (PV) equipment in the area and that you need a 9.5 kilowatt (kW) system to offset your electric bills like most other Indiana residents. This is the average system size, which is designed to offset the typical monthly electric consumption of 938 kWh per household.

Does installing solar panels increase property value in Indiana?
Yes,installing solar panels on your home is expected to boost your property value in Indiana by approximately 4.1%,an estimate based on research conducted by Zillow. 4 Since the typical home in Indiana is valued around $230,053,that's an expected value bump of over $9,400. 5

Does Indiana charge sales tax on solar panels?
The State of Indiana waives all sales taxon solar PV equipment. This policy brings down the effective cost of panels,inverters,solar batteries,EV chargers and the labor to install your system. This tariff is available to all customers of Northern Indiana Public Service Company (NIPSCO).

How can I reduce my cost of going solar in Indiana?
