

Are plug-in solar panels a good option for renters?

Plug-in solar panels are an interesting option that should be appropriate for most renters. These solar panels have micro-inverters that convert the DC energy of the panel to the AC power used by your home. They feed power into your home through a standard electrical outlet, synchronizing with grid power.

Should you lease or buy solar panels?

Instead of purchasing and owning the system, you would allow a third-party company to install panels on your roof with little or no upfront cost, and then pay monthly to lease the panels. You'll still be generating clean energy and potentially lowering your electricity bills. But here are some other things to consider when leasing solar panels:

Can renters install solar panels on the ground?

This is the only way for renters to get a permanent fully-integrated solar power installation, but that's not the only way you can access solar power when you need it. Solar panels can also be installed on the ground. Although you'll still need permission from your landlord and help from them getting permits.

What is a solar lease?

Solar leases are very similar to power purchase agreements (PPAs). With both options, a solar developer installs and owns the solar panels on your roof. The two differ in how you pay for the solar energy. Solar lease payments are the same every month, whereas solar PPA payments are based on the amount of energy the panels actually produce.

Should I get solar power if I'm renting?

Whether you want to be more green or need backup power in case of a blackout, getting solar power for your home is a great way to do it. However, if you're renting you can't install just anything. Your first port of call should be the owner of the property.

How much does a solar lease cost?

Lease arrangements for solar panels vary widely, depending on the size of the solar system and who your installer is. (Again, think of the analogy of leasing a car.) Generally speaking, a solar lease will cost between \$100 and \$200 a month, according to Michaud. But the best way to know for sure is to get an estimate from a solar company.

If you rent an apartment, the first step is to talk to your landlord. Some state or territory governments provide solar subsidies specifically for apartment buildings. Learn more about government rebates and loans. You ...
