

Does Rocky Mountain Power offer net metering?

Rocky Mountain Power offers net metering or net billing compensation to customers in Idaho, Utah, and Wyoming. In Idaho, there is no overlap between service areas for Rocky Mountain Power and the state's other large energy suppliers, Avista Utilities and Idaho Power.

How many tiers are there in Rocky Mountain Power net metering?

There are three tiers within the Rocky Mountain Power net metering program, each with their own requirements for interconnecting a solar panel system. Tier 1 is less than 25 kilowatts (kW), which is the tier most residential units fall under.

Does Rocky Mountain Power offer metering credits in Utah?

Importantly, Rocky Mountain Power doesn't offer full retail rate for their net metering credits in Utah: as of 2021, customers receive a credit rate of about 6 cents per kilowatt-hour (kWh), or roughly half of the retail rate. UAMPS is still in the process of creating a rate structure for its customers.

What is solar net metering?

Solar net metering is a system that allows solar electricity users and producers to send excess power produced by their solar panels back into the main grid. This concept does not apply to off-grid or stand-alone solar systems.

What is the best net metering program?

As a result, location is the most significant factor determining the best net metering program. However, Rocky Mountain Power is the best for renewable energy generally due to its Blue Sky program that supports renewable energy development for those unable to install a solar panel system on their own property.

What is Rocky Mountain Power's new smart metering technology?

Rocky Mountain Power is upgrading 260,000 meters in Utah and Idaho to new digital meters, also known as smart meters or advanced metering technology. The installations will roll out across the region throughout the remainder of 2021 with forecasts for completion in 2022.
