

Will Rocky Mountain Power cut solar energy rates in Utah?

Rocky Mountain Power Inc. is looking to dramatically cut the rates it pays to rooftop solar customers in Utah for sending energy back onto the grid. Even as it transitions away from coal-fired power generation in an effort to reduce carbon emissions.

Does Rocky Mountain Power offer rooftop solar?

Rocky Mountain Power has 309 MW of rooftop solar capacity installed among its customers as of the end of 2019. This is higher than previous estimates from SEIA and Wood Mackenzie Power and Renewables.

Why is Rocky Mountain Power proposing a new solar system?

Rocky Mountain Power is proposing this change to reduce the number of customers who install rooftop solar systems, according to Gallagher. The utility, which serves approximately 907,000 customers in Utah, has a total of 40,450 rooftop solar customers.

How much energy would Rocky Mountain Power have generated?

If Rocky Mountain Power had generated the same amount of electricity as the customers' rooftop solar, it would have cost them approximately \$700,000, according to the company's estimation. According to advocacy group Vote Solar, regulators should maintain the general structure of the transition program and pay customers 22.6 cents/kWh for their excess energy.

Does Rocky Mountain Power offer incentives?

If you are planning a project over 25 kW and plan to sell power to Rocky Mountain Power, find information on qualifying facilities, grid connection requests and market-based incentives. If you have onsite solar generation, you can earn incentives for allowing us to automatically manage your battery as part of our smart grid.

How can I get solar power in Utah?

You can get solar power in Utah by subscribing to a 20-megawatt solar plant in Millard County. Choose between offsetting your usage on your bill with blocks of 200-kilowatt-hours (kWh), or opt for full coverage where all of your kWh is billed on the Subscriber Solar rate. Keep your subscription for up to 20 years.
