How do you sell solar energy back to the grid?

Selling electricity back to the grid, also known as an export rate, or net metering, is a process that allows solar panel owners to generate their own electricity and earn credits for excess energy they feed back into the grid. Here's a detailed explanation of each step involved in sell solar power: 1. Installation of solar panels:

How do you sell back solar power?

Read on to learn about the different ways to sell back power. This is the most common way consumers believe they can sell electricity to the grid. However, the way that you can earn income from excess solar power is through net metering. Currently, there are over 35 states that offer a net metering program for solar system owners.

Can you sell solar power to the grid?

Although many people with solar systems on their homes or businesses think that they can sell excess electricity to the power grid, the reality is that you can only sell power to the grid if you have an electricity generator's license and qualified power-generating assets.

What happens if you sell energy back to the grid?

Higher electricity rates mean that each kilowatt-hour (kWh) of excess energy you sell back to the grid is worth more, increasing your potential earnings. Net metering policies: Net metering policies vary by state and utility company and can impact how much you earn from selling energy back to the grid.

Can a new solar installation save you money?

Not only will a new solar installation give you renewable energy, but it can help lower energy costs or even put money back into your pocket. Contact Airis today to learn how solar panels can slash your energy bills, and allow you to start selling electricity back to the energy company.

What are the benefits of selling solar energy?

One immediate benefit of selling solar energy is earning credits on your utility bill, significantly reducing overall energy costs. Utilizing solar incentives and net metering programs allows homeowners to convert solar energy production into financial savings. Credits are based on excess electricity generated, measured in kilowatt-hours.
