

Simi valley car charging station powered by coal

Does a home charging station use a lot of energy?

And if you own a home charging station, it's connected to the grid. It's America's power supply divvied out among your community, with 40% of that power generated by natural gas and 19% by coal. So, while the electric car has zero emissions, the energy it gets isn't. However, that doesn't mean charging stations don't use other clean fuels.

Are charging stations connected to the grid?

We'll rip the band-aid off now: natural gas is the most common charging station power source. It's cheap, abundant, and accessible. But not all electricity is generated by fossil fuels alone, as charging stations are connected to "the grid." Your house is connected to the grid. And if you own a home charging station, it's connected to the grid.

Do charging stations use other energy sources?

As the U.S. Energy Information Administration explains, the grid uses all sorts of power to generate electricity. However, stations may utilize other energy sources depending on their location. Charging stations in Las Vegas and other parts of Nevada use more hydroelectric energy due to the Hoover Dam.

Charging stations in cities. Specific city pages provide a good overview of charging stations in a particular city. For larger cities like Los Angeles, New York, San Francisco and Seattle you can find more information about charging stations. Search for a city and you will land on a page for that particular city.
