

What are flexible and soft packaging materials?

When we talk about flexible and soft packaging materials, we're referring to a broad category of packaging solutions that are characterized by their ability to bend, fold, and conform to the shape of their contents without losing integrity. This category is distinct from rigid packaging, which maintains a solid shape and structure.

What is a flexible intermediate bulk container?

Flexible Intermediate Bulk Container is an intermediate bulk container that is flexible instead of rigid. The flexible characteristic of the container means that it can change shape, and therefore it will take up little space when empty (before filling and after emptying). Is "Flexible IBC" the same as "FIBC"?

Which material is best for soft packaging?

Polyethylene (PE) stands out as one of the most adaptable and widely used materials in the realm of soft packaging. Recognized for its versatility, PE comes in various forms, each suited to different packaging demands. Its low cost and easy processability make it an attractive choice for a broad range of applications.

What is flexible intermediate bulk container (FIBC)?

Flexible Intermediate Bulk Container, often referred to as Flexible IBC or "FIBC", presents a modern approach to bulk packaging when compared to its rigid counterpart: the traditional IBC tank. In this article, we at Fluid-Bag go through the concept of flexible IBCs, highlighting their features, benefits, and applications.

What are the best flexible packaging materials?

Polypropylene (PP) is another cornerstone in the family of flexible packaging materials, notable for its impressive combination of strength and transparency. Its robustness makes it particularly useful for packages that need to withstand wear and tear during shipping and handling, while its clarity is perfect for displaying the product within.

Are flexible packaging materials environmentally friendly?

Some flexible packaging materials, such as biodegradable plastics, are designed to be more environmentally friendly. Additionally, flexible packaging typically uses less material and energy to produce, and advancements are being made to create recyclable and compostable options, aiming to reduce the industry's environmental impact.

Big-Bag - is soft polypropylene container with carrying capacity of 0.5 to 2 tones. It is used for storage and transportation of bulk goods (construction materials, food additives, chemical products, bio-fuels, minerals, iron ore ...

Soft Plastic Bottle, Soft-touch Packaging, Soft-finish package. The advantage of our soft-touch technology: The Soft Touch HDPE Canister is produced using advanced plastic molding ...
