

What is a solar powered exhaust fan kit?

With our Solar Powered Exhaust Fan Kit, you can effectively improve ventilation and control the temperature inside your shipping container. By removing excess heat and moisture, this kit helps prevent damage to your stored items and creates a more comfortable and functional space. Don't miss out on the benefits of our Solar Powered Exhaust Fan Kit.

How do you install a solar fan on a container roof?

The kit includes all the necessary hardware for mounting the fan onto the side and the solar panel onto the roof of the container. It comes with JB Weld, a high-strength adhesive, to securely bond the solar panel brackets to the container roof. The wires are pre-wired with connectors, ensuring easy and hassle-free installation.

How do I install a solar powered exhaust fan kit?

Installing the Solar Powered Exhaust Fan Kit is straightforward. A hole needs to be drilled on the roof of the container, and a square hole must be cut in the side of the container. The kit provides a template for precise hole placement.

Do you need a vent for a sea can?

If condensation does become an issue, installing proper ventilation will prevent any problems in the future, such as mould or mildew growing inside your sea can. If you need a vent that exchanges air within the container consistently, check out Container Modification World's Solar Powered Exhaust Vent.

How does a solar exhaust fan work?

Our exhaust fan operates on solar power, harnessing the energy from the sun to provide continuous ventilation without the need for external power sources. This energy-efficient solution reduces electricity consumption and helps maintain a comfortable environment within the container.

Which roof vent is best for a Conex container?

This product is an ideal ventilation choice for your Conex-brand container. CONTENTS INCLUDE: The Solar RoofBlaster Fan (patent-pending) comes pre-installed on an 8" metal can roof vent with flashing that has been designed to fit a Conex container's ribs that measure 3.5" or 6.5" ribs when measuring the top flat portion of the roof rib.
