

Can a smart meter work with solar panels?

Smart meters and solar panels can work together to help you reduce your energy bills, and keep track of the energy you're generating and using. In this blog post, we'll explain everything you need to know about using a smart meter with solar panels, and answer some of the most frequently asked questions. How do Smart Meters work?

How can smart meters and solar panels help reduce energy usage?

In the face of climate change and high energy bills, households need ways to cut back on their energy usage. Smart meters and solar panels both offer a solution. Smart meters promote awareness of your energy usage and encourage reduced consumption, whilst solar panels significantly cut the amount of electricity you buy from the grid.

Can a smart meter read exported energy from solar panels?

However, it's important to note that not all energy suppliers have updated their systems to fully support the reading of exported energy from solar panels. For instance, while companies like EDF Energy, British Gas, Ovo Energy, Utilita, and Octopus have made their smart meters compatible with solar panel systems, others are yet to do so.

How does a smart meter calculate energy usage?

Smart meters calculate net energy usage by subtracting the surplus electricity generated from the total energy consumed. An electric meter is a key component of a functioning solar system. Take the example of a house with solar panels sitting empty for a few days while the owners are away on vacation, Valdez said.

What if I don't have a smart meter?

If you have a solar panel system but don't have a smart meter, you should get in touch with your energy supplier and ask for one. Since mid-2017 and the launch of SMETS2, smart meters and solar panels have been a complementary match, and are an essential pairing if homeowners want to take advantage of any solar export tariffs.

What is a second generation smart meter?

With a second generation smart meter installed, homeowners with solar panels can take full advantage of their renewable energy systems. These smart meters provide detailed information on how much energy is being consumed from the grid versus how much is being generated by the solar panels.

You can have a smart meter and solar panels in your home, and enjoy the benefits of both because the second generation of smart meters are compatible with all solar panels. If you're unsure about the best option for you,
