

How much does solar cost in Connecticut?

However, most Connecticut residents only need a 7.5-kW system due to below-average energy needs, whereas the typical solar panel system size in the US is 9 kW. As such, the average total for solar in Connecticut is \$26,175, or \$18,323 after the 30% federal solar investment tax credit is considered.

Why is solar so popular in Connecticut?

Solar is more popular in Connecticut now than ever before, in part because of the recent launch of the Connecticut Property Assessed Clean Energy Program (C-PACE), which makes solar more accessible for commercial solar customers.

Are solar panels worth it in Connecticut?

Solar panels provide the most value in areas with high energy needs or high electricity rates. Although Connecticut uses less power than the national average, the electricity price is nearly double the national average -- 26.78 cents per kWh as opposed to the national average of 16.79 cents.

Should you switch to solar power in Connecticut?

Considering switching to solar power in Connecticut can help contribute to the state's clean energy goals. In 2019, Connecticut Gov. Lamont released a plan to achieve 100% carbon-free electricity across the state by 2040.

How much solar energy does Connecticut produce?

Connecticut currently produces 908.6 MW of solar energy annually through 53,946 installations. This is enough solar energy to power 130,963 homes. \*What are the advantages of going solar in Connecticut\*

Is there a solar farm in Connecticut?
