

Does Missouri produce solar energy?

Missouri produces solar energy and currently ranks 34th in the United States for its solar energy production. \*However\*, the state offers incentives to encourage residents and businesses to embrace clean energy. Missouri's solar capacity has been growing since the solar industry took root there in the early 2010s.

What are the different types of solar in Missouri?

Commercial solar, community solar and utility-scale solar are all finding their foothold in Missouri as well. Solar adoption has been relatively slow in the Show-Me State primarily because wind power and hydropower are both more prevalent in terms of renewable energy sources.

Are solar panels worth it in Missouri?

Solar panels provide more value in areas with high electricity rates or above-average energy consumption. Although the going price per kWh in Missouri is a bit below average, the electricity consumption far exceeds the national average. As such, Missouri homeowners stand to save more by going solar than most.

How many solar companies are there in Missouri?

There are 119 solar companies operating in Missouri. The five-year growth projection for the state is 647 MW.

Why should one install solar panels in Missouri?

Installing solar panels in Missouri is beneficial for several reasons. Solar panels generate years' worth of reliable energy without contributing to pollution and help reduce Missouri's dependence on environment-damaging fossil fuels like coal and oil. This is not only good for the environment but also financially beneficial to homeowners and businesses.

How much solar does Missouri use a month?

The average Missourian uses an average of 1,028 kWh per month, putting the majority of homeowners well above the cutoff for solar viability. This consumption rate is also well in excess of the national average of 893 kilowatt-hours, meaning solar is more worthwhile in Missouri than in most other states. How Much Is It To Go Solar in Missouri?
