

Is North Dakota a solar-friendly state?

North Dakota is far from the most solar-friendly state, but there are still solar incentives offered in the area by the state and federal governments. One of the most significant incentives is the federal solar tax credit (ITC). This is a credit to your federal tax liability for 30% of your entire renewable energy system expense.

Are solar panels worth it in North Dakota?

Solar panels provide the most savings and the most value in states where power bills are high, which could be attributed to elevated electricity rates or above-average energy consumption. North Dakotans pay below average for electricity but use more than most US residents.

Is solar a good investment in North Dakota?

You can check your past electric bills for your average monthly consumption. The average home in North Dakota uses around 1,085 kWh per month, putting the state above average in energy usage and also putting most residents well above the 500-kWh benchmark. As such, most North Dakotans use plenty of energy to make solar a worthwhile investment.

How much is a solar tax credit in North Dakota?

One of the most significant incentives is the federal solar tax credit (ITC). This is a credit to your federal tax liability for 30% of your entire renewable energy system expense. In North Dakota, the typical ITC amount is \$7,986.

How much does solar cost in ND?

This is well below the national average of \$2.66 per watt and makes ND the fourth most affordable state for solar equipment. Most homes in the Peace Garden State need around an 11-kW system, putting the average total price to go solar around \$18,634 after the federal tax credit is taken into consideration.

What solar incentives are available in North Dakota?

Although fewer in number than most other states, below are some additional North Dakota solar incentives you can take advantage of: Net Metering: As mentioned above, net metering is an excellent solar incentive that increases your return on investment, further reduces your energy bills and makes solar more valuable.
