

Does San Bernardino have solar energy?

San Bernardino sees more than 300 sunny days each year, so it comes as no surprise that more and more residents are installing solar energy systems. The city has greatly increased its solar energy production over the past decade, a laudable step toward its stated goal of self-reliance as a community to meet its own energy needs.

What percentage of San Bernardino County's electricity comes from solar?

Currently, 11% of San Bernardino County's electricity output comes from solar thermal production, and 3-7% comes from solar photovoltaic production. The county estimates that it has the highest potential of any location in the United States for even greater solar energy production.

How much does a 5 kW solar system cost in San Bernardino?

In San Bernardino, we found that the cost of purchasing a 5 kW solar system ranges from \$13,850 to \$28,000, or in other words, from \$2.77 to \$5.60 per watt. And that's before considering the benefits of any available tax credits or incentives. Here are a few of the incentives available to San Bernardino property owners:

Are solar panels tax deductible in California?

The value added to your home by installing a solar system is also 100% exempt from your property taxes, and the purchase of your equipment is exempt from California's 6% sales tax. \*California Revenue & Tax Code &#167; 73 California Revenue & Tax Code &#167; 6377.1

What incentives are available to San Bernardino property owners?

Here are a few of the incentives available to San Bernardino property owners: The federal government offers the Investment Tax Credit (ITC). Qualified homeowners who purchase rather than lease their solar system can claim a credit valued at 30% of the cost of their system. \*Tax credits subject to change.
