

What are the UK solar energy statistics?

Below are 20 solar energy statistics from the UK market, including data on the current and proposed capacity for residential, commercial, and national installations. Click below to jump ahead: 43% of the country's power comes from renewable sources, including solar. 28% of the UK's renewable energy is solar.

Is the UK a good place to generate solar energy?

The UK is not known for its warm and sunny climate, so it may not seem an obvious country in which to generate solar energy. However, solar power generation only requires some level of daylight to extract the sun's energy, meaning Britain can still harness solar power during our frequent overcast and rainy days.

How many people work in solar energy in the UK?

13,860 people work in solar energy in the UK, according to the Association for Renewable Energy and Clean Technology's (REA) 2023 report. 3,759 of these employees - around 27% - are in London, though you can find hundreds of solar workers in every region of the UK.

Are solar panels a good investment in the UK?

Solar panels on properties in the south of the UK are usually able to generate more energy than those in the north due to increased amounts of sunlight. Energy in the form of heat can also be captured and used for heating in the home.

How many solar homes are there in the UK?

In 2010, there were just 28,211 solar households. That's a 4,862% increase in 14 years. It took just three years to raise this number to 500,000, but another eight years after that to hit a million in 2021. The rate of solar adoption has picked up since then, though - meaning we should hit 1.5 million UK homes with solar panels in early 2025.

Who supports the 40GW target for solar energy in the UK?

Solar Energy UK's call for the Government to show higher ambition for solar energy in Britain, and set a 40GW target, has been backed across the energy sector and by several green organisations this year.

Solar contributed 28% of the U.K.'s total renewable energy generation, which was dominated by wind power. The proportion of fossil fuels in the energy mix fell to a record low last year, at 37.7%.

We used detailed industry data to analyse the impacts of expected further cost reductions on the competitiveness of solar power in Britain, and assess whether the solar market can survive without support in the near ...

Solar energy in the UK explains the UK's solar energy situation. Literature review reviews the relevant solar energy literature. Data sources covers the sources and collection of ...

1.5 million homes in the UK have solar panels, as of March 2025, according to government data. In 2010, there were just 28,211 solar households. That's a 5,217% increase in 14 years. It took just three years to raise this ...

Back in 2014, wind and solar accounted for around 10% of Great Britain's electricity. That has now risen to about a third, according to Neso's figures. ... with the UK's final coal power station ...

Today, there are four main renewable energy sources used to power the UK: wind, solar, hydroelectric and bioenergy. They harness the natural power of the sun, our weather, our waterways and tides, and organic materials to ...

Solar power is one of the UK's largest renewable energy sources and therefore we're asked a lot of questions about it. Here we address some of the most frequently asked questions, myths and misconceptions surrounding ...

Solar Energy UK expects 10% of this to be deployed in Scotland. This will be a major challenge, even with the solar industry demonstrating strong growth. Solar Energy UK analysis shows that the UK can both set and achieve ...

The UK's solar power landscape is dynamic and rapidly evolving, with cities and regions embracing this clean and abundant energy source. The adoption of solar power is gaining momentum. Solar hotspots like Plymouth, ...

Overall, 2018 had been a very successful year for the European solar market with 21% annual increase in solar installations and 11.3 GW solar power being added. ...

Solar power is an increasingly important source of clean energy even for a relatively cloudy mid-latitude nation such as the UK. Using areal sunshine series published by ...

What percentage of the UK's energy is solar? Regrettably, solar power's share in the UK's total energy generation remains relatively modest, with the year 2023 seeing it contribute to just approximately 2.3% of the total ...

The real opportunity available to the UK is to deliver clean power by 2030 in a nature positive way, such as rewetting lowland peat soils at the same time as constructing new solar farms or ...

Solar Energy UK 2 April 2025 Solar power and battery storage is powering up the UK's economy. The sectors are expected to almost triple their annual contribution to £5.1bn by 2035, while employing well over 40,000 people, says a new ...

According to Solar Energy UK, solar panel performance falls by 0.34 percentage points for every degree that the temperature rises above 25°C. Plus, the longer days and clearer skies mean solar power generates much ...

Solarsense is a UK-based solar energy company that provides solar PV systems, battery storage, and energy-efficient lighting solutions for residential and commercial customers. With a commitment to sustainability ...

In an age where renewable energy solutions are more than a mere trend but a necessity, the UK stands on the brink of an energy revolution. As we stride into 2024, solar panels and battery storage systems are leading the ...

Solar power will be a key driving force behind the 2030 clean power mission, Energy Secretary Ed Miliband told industry today (Wednesday 2 October) during the first meeting of the government's ...

Together, these projects account for enough renewable electricity generation capacity to power thousands of UK homes, support local supply chains and jobs, and make an important contribution to the UK's ambitions for net zero and ...

In 2023, the UK will have installed over 14 GW of solar photovoltaic (PV) capacity, enough to power over 4 million residences. The sector employs approximately 35,000 individuals, ...
