

Does Michigan have enough solar power?

According to the Solar Energy Industries Association, Michigan had enough solar capacity to power 83,045 homes in the first quarter of 2021 -- out of 4.6 million homes in the state. That's just 1.8 percent of Michiganders' homes. Solar companies numbered 188 in Michigan, employing 3,379 people out of 231,000 jobs nationwide.

How many solar installations are there in Michigan?

*These installations provide 0.37% of the state's electricity and can power 83,045 homes. Overall, Michigan has 11,844 solar installations, the most prominent being the Watervliet Solar Power and 1 MW, Domino Farms Solar. Additional information about other solar installations is on SEIA's website.

Are solar panels worth it in Michigan?

Although Michiganders use less power than most U.S. residents, the electricity rates average around 19.32 cents per kilowatt-hour, which is well above the national average. As such, solar panels are more valuable in Michigan than in most states because the cost they offset is higher per kWh.

Why should you go solar in Michigan?

Going solar helps you avoid future rate spikes and save more in the long run. The state and federal governments provide several incentives to entice homeowners in Michigan to convert to renewable energy. One of the most appealing tax incentives is the federal solar tax credit, commonly called the ITC.

Are large scale solar projects coming to Michigan?

Large scale solar projects meant to power Michigan's homes and businesses are expanding, with potential developments popping up across the state.

Is solar a good investment in Michigan?

The energy rates are much higher in Michigan than in most other states -- an average of 19.32 cents per kWh as opposed to the national average of 16.79 kWh -- so solar will likely be a good investment for your home even if you use less power than most homeowners in your area. You can check your average consumption on your past energy bills.
