

Does Montana have solar energy?

Montana may be far north, but some places in the state still see plenty of sun. The amount of solar energy generated depends on the location within the state, with the southeastern portion having more potential than the mountainous northwestern part.

What is the cost of solar in Montana?

The cost of solar in Montana for a typical system is about \$20,286 after the federal tax credit, with residents paying an average of \$3.22 per watt.

Do solar panels save energy in Montana?

Montana receives about 201 sunny days per year, which is in line with the national average of 205 sunny days. Solar panels are only as efficient when they receive direct sunlight, so homes in Montana that get a lot of sunlight will have a higher potential for energy savings with solar panels.

Does Montana have a solar tax credit?

Montana does not have a state solar tax credit. However, homeowners can take advantage of the federal solar tax credit, which allows you to deduct 30% of your solar installation costs from your federal income taxes. That's thousands of dollars in savings!

What solar incentives are available in Montana?

The most significant solar incentive available in Montana is the 30% federal solar tax credit. This credit is available to any taxpayer in the country when they purchase solar panels or battery storage. Additionally, some states and utility companies may offer additional solar incentives.

Is solar a good option in Montana?

Montana homeowners use an average of 858 kWh monthly, which is higher than the national average. As such, most residents will find that solar is a good option for meeting their energy needs. You can check your average monthly consumption on your past electric bills. (How Much Is It To Go Solar in Montana?)
