

Are solar panels worth it?

In areas with low levels of solar radiation, such as locations in higher latitudes, solar panels may not produce as much energy, making them a less cost-effective option. The same could hold true for areas with lots of cloud cover and rainfall.

Is solar energy worth the investment?

Solar energy itself is cost-effective. Systems produce free energy with limited maintenance for their lifespan, which averages 30 to 35 years. However, many people have to decide if solar is worth the investment.

Could solar power be the future of energy?

A 2021 study by the National Renewable Energy Laboratory (NREL) projected that 40% of all power generation in the U.S. could come from solar by 2035. Solar's current trends and forecasts look promising, with photovoltaic (PV) installations playing a major role in solving energy problems like carbon pollution and energy dependence.

Are solar and wind more expensive?

But though it was once true, that assumption has actually been obliterated by a recent decline in solar and wind costs over the past decade. When it comes to the cost of energy from new power plants, onshore wind and solar are now the cheapest sources--costing less than gas, geothermal, coal, or nuclear.

Are solar panels cheaper than wind?

Utility-scale solar arrays are now the least costly option to build and operate. Wind power has also shown a dramatic decline--the lifetime costs of new wind farms dropped by 71 percent in the last decade. Solar got cheaper without you even realizing it. Infographic by Sara Chodosh
