

What is the cost of solar power in New Zealand?

According to the Electricity Authority, the average cost of a fully installed 4.4 kW residential solar power system in New Zealand is roughly \$12,600. This system would include 10 or 11 solar panels and a 4 kW or 5 kW inverter.

Are solar panels a good investment in New Zealand?

A solar power system in New Zealand can easily earn a 10 to 15% return on investment. This rate of return is likely to increase each year as the price of electricity continues to climb. If you're unsure if solar panels on your roof will be worthwhile or if the upfront cost will lead to a good payback, consider the potential returns.

Do solar panels work in New Zealand?

Absolutely! New Zealand has abundant sunshine and generates between 1,700 and 2,100 sunshine hours annually. Some areas, like Nelson and Gisborne, receive as much as 2,400. Solar Panels don't require sunshine; they require daylight, so Solar Panels work year-round, even in the lower South Island.

Why is solar power important in New Zealand?

We believe that solar power is a crucial step towards reducing the carbon footprint of New Zealand and making clean energy more accessible. At the same time, we understand that the cost of solar installation can be a barrier for many people.

How much does a solar package cost?

Packages start at just \$10,999 including GST and installation (see full terms and conditions below). Contact us for a free consultation and quote, or read on for more information. Looking for a seamless, efficient, and powerful solar energy solution?

How much does it cost to connect a solar power system?

The cost of connecting a solar power system to the grid varies by local lines companies. Some charge a fee between \$100 and \$200 for administration fees to accept your solar power system's export of excess power into the grid, while others may not charge anything. Check out the solar fees for every lines company here.
