

Which states generate the most solar energy this month?

California once again takes first place among the top states generating electricity from solar power this month. The Golden State produced 26.7% of the United States' total of 32,642 thousand megawatt-hours, according to ChooseEnergy.com's September's solar energy generation report.

Which state has the most solar power?

1. California California ranks as the top state for solar by a wide margin. And it's no surprise since the Golden State enjoys almost 300 sunny and partly sunny days per year. Solar is a booming business in California, where more than \$90.6 billion has been invested in solar generation.

What is the percentage of electricity from solar in California?

California is the top state in this list, with about 46.6% of its electricity coming from solar generation. Following are the states that produced the largest percentage of their power from solar energy. You can significantly lower your energy costs by investing in solar panels.

Does Alaska have solar power?

Alaska ranks third from the bottom in solar generation. Its \$49 million investment in solar is significant, but solar generation in the state still remains low. Only .23% of the state's electricity is sourced by solar. Alaska, one of the cloudiest states in the U.S., is also limited by its seasons.

How much solar energy does West Virginia have?

West Virginia has installed a modest 31 megawatts (MW) of solar capacity, with just 19 solar companies operating within the state. Solar energy accounts for a mere 0.06% of the state's electricity production. The state's strong reliance on coal, being the second-highest coal producer in the U.S., contributes to the slow adoption of solar energy.

Does Nebraska have enough solar energy?

Nebraska Nebraska is another state with very little solar energy growth in recent years. It only has enough solar installed to power 10,090 homes, with just 0.30% of the state's electricity coming from solar. However, Nebraska has a larger growth expectation, with the SEIA anticipating 1,548 more MW of solar in the next five years.
