How do I calculate my solar payback?

You can use the solar payback calculator to estimate how soon you'll get your money's worth. There are some aspects that go into calculating your payback period such as: How much money can I save by installing solar panels? Your savings from installing solar panels will vary depending on: Where you live.

How do I use the solar power calculator?

Simply use the solar power calculator to enter how much you're currently paying for your energy bills. Our calculations are based on what you would save with a 6.6kW solar system and provide you with an estimated bill price, what you would save on each bill and how much you would roughly save each year. Try it for yourself today to find out more.

How much money can a solar system save a year?

As a general rule of thumb, you could save \$400 per year per kW by installing solar. If you install a 6kW solar system, you could be looking at \$2,400 in savings each year. However, it's best to calculate saving estimates based on your household and a solar payback calculator can help you do just that.

How can I save money on solar power?

Generally, the best way to make savings from solar is to use your electricity during the day whilst the panels are generating energy. In short, the more electricity you use during the daytime, the higher your solar savings overall will be. There are financial variables to consider too when it comes to solar power.
