

What types of solar panels are available in BC?

Solar panels are becoming increasingly popular in BC, allowing homeowners to take control of their energy needs. Different types of solar panels, such as monocrystalline, polycrystalline, and thin-film panels, each come with unique features, allowing you to choose the best fit for your home's requirements.

Do solar panels work in BC?

Solar panels in BC are designed to work efficiently even in cloudy conditions. While direct sunlight increases production, modern panels still generate electricity from diffused sunlight, making them effective year-round. How much can I save with solar panels in BC?

Is solar power possible in BC?

We wouldn't be talking about solar panels in BC if it wasn't a viable option for most of the province! According to BC Hydro, the average 16-panel solar photovoltaic system in the province produces 7,700 kWh of electricity over a year, or 77% of an average household's electricity usage.

Are solar panels a good option for BC homeowners?

While solar panels are a popular choice, other renewable energy options exist, such as wind and geothermal energy, however, for most BC homeowners, solar panels offer the best combination of affordability, availability, and practicality.

How do I install a solar panel system in BC?

Here's a detailed breakdown of the different steps involved in installing a solar panel system for your home or property in BC: The first step involves a solar technician visiting your property to assess its suitability for a solar energy system. This includes evaluating the roof structure, orientation, shading, and overall energy needs.
