

How many people in Wollongong have solar panels?

Almost a quarter of all households in Wollongong have solar panels on their roof, according to the APVI. This article gives you an idea of why so many homeowners have made the switch to solar power. How much energy do Solar Panels produce in Wollongong?

Why should you install solar panels in Wollongong?

Wollongong solar power system owners are also contributing to greenhouse gas emission reduction, with the systems in 2500 region avoiding 20,116 tonnes of carbon dioxide emissions annually. Installing Solar Panels In Wollongong?

Which direction should solar panels face in Wollongong?

Solar panels produce more energy if the sun is directly perpendicular to the solar panels. In Wollongong, solar power output is higher when solar panels face north. In the north direction, your solar panels will receive maximum sunlight throughout the day. North-facing solar panels are the best choice for a residential solar panel installation.

How much solar energy does Wollongong get per day?

According to National Renewable Energy Laboratory (NREL), Wollongong receives approximately 4.6 hours of solar radiation per day. It may decrease in the winter season and goes higher in the summer season. 1kW of solar panels produce around 3.9 kWh of solar energy by assuming the efficiency rate of the solar system around 85%.

Do Wollongong Solar System owners get paid?

As well as providing your home with electricity, Wollongong solar system installation owners can be paid for surplus energy generated. In NSW, feed-in tariffs generally currently range from 5c to 10c per kilowatt-hour exported - so, it's important to compare energy retailers for the best electricity plan in the 2500 area.
